User Guide — Build and Run Your Own Store

Classical editing. Conversational building. One shared site.

Worked example: H2 | 4 YOU · h24you.com

21 September 2026 · Local demonstration edition

Contents

Section	Pages / slides	What you will do
01 · Get started	3–6	Understand the two flows and the H24YOU page plan
02 · Build with classical controls	7–13	Edit pages, products, media, shared content and research
03 · Build with chat	14–26	Use the H24YOU prompt library, preview changes and undo
04 · Prepare commerce	27–34	Review merchant data; try checkout, subscriptions, accounts and email
05 · Review and launch	35–39	Separate Phase 1 approval from commerce acceptance; replace placeholders

The PDF and PowerPoint use the same page/slide sequence, following FastClinic’s sectioned guide pattern. Screenshots show a local H24YOU fixture—not a live-site audit, an actual customer, a payment-provider test or regulatory approval.

Production workflows were checked on 21 September 2026. See the [production verification report](#) for coverage and exclusions; the guide screenshots remain local examples.

SECTION 01

Get started

Use H24YOU as a worked example. Build the design and content first, review it, then prepare commerce in a separate, explicitly approved phase.

Your sample store: H2 | 4 YOU

H24YOU demonstrates a content-rich US store: hydrogen tablets in **Unflavoured, Raspberry and Pineapple**, plus a branded **Hydroxy Go bottle**. The brief specifies English and USD. In running copy use **H2 4 You**; the logo uses **H2 | 4 YOU**.

FastShop is the platform. Your storefront has its own visual identity; FastShop's merchant controls retain FastShop branding.

The original brief requested Shopify. The subsequent implementation direction uses **FastShop's embedded content editor and Stripe boundary**, not Shopify hosting, Shopify Email or Shopify Subscriptions. No domain/DNS setup is implied.

Sign in and choose your building flow

1. Sign in at your FastShop installation's `/login` .
2. Open **Sites & content** at `/admin/sites` .
3. Open **H2 4 You**, or enter a new site name and unique slug.
4. Choose **Classical editor** or **Build with AI / guided presets**.
5. Optionally start a new private site with labelled sample merchant details.

Both flows edit the same draft. Switching flows does not duplicate the site. For the sample storefront, `/sites/h24you/` works when its preview is published. The builder's authenticated preview remains the place to inspect unpublished edits.

The screenshot shows the FastShop admin dashboard. At the top, there's a header with the FastShop logo and navigation links for 'Dashboard' and 'Sites & content'. The main content area is titled 'Your websites' and includes a sub-header 'Build your story. Shape your storefront. Publish when you're ready.' Below this, there's a card for 'H2 4 You' with the URL '/sites/h24you' and an 'Open editor --' link. Underneath, the 'Create a website' section contains form fields for 'Site name' and 'Site address' (pre-filled with 'your-brand'). It also includes a message: 'Start with the editorial commerce theme. Your site stays private until you publish.' A dropdown menu for 'Build your way' is set to 'Classical editor'. There's a checkbox for 'Start with clearly labelled sample merchant details' which is unchecked. At the bottom of the form is a green 'Create site' button.

Plan H24YOU's pages before editing

Area	Pages and purpose
Home and Shop	Home, Shop, Hydrogen Tablets collection, Hydrogen Water Bottles collection
Products	Hydrogen tablets; Hydroxy Go bottle
Science	Research library, source links and grouped research themes
Learn	Index plus three educational launch articles
Company	About us; Contact
Policies	Terms and Conditions; Privacy Policy; FAQ; Returns and Refunds
Shared components	Header, menu, footer, announcement, first-order banner, cookie preferences

The seeded example contains **17 page routes**. Navigation and legal links are shared settings; articles and product storytelling are editable pages. Underlying product variants and prices are separate catalog records.

SECTION 02

Build with classical controls

Use forms when you know exactly what to change. Save drafts, preview them and publish deliberately. These are the same drafts that chat edits.

Brand, navigation, banner and footer

Open the **Classical editor**. In **Brand and shared content**, edit the brand name, tagline, contact email, company details, announcement and first-order banner. Set menu labels/paths, social links, research figures and the footer disclaimer here.

For H24YOU, keep **Shop, Science, Learn, About us, Contact** in the main menu. Use the supplied dark logo on light backgrounds and the light logo on dark media.

Choose **Save draft settings** first. **Publish shared settings** exposes the reviewed shared content. The brief's legal address is a placeholder—not a confirmed warehouse address. Changing a reviewed merchant value requires another review.

Announcement
A fresh perspective on your everyday water.

Edit a page without code

1. Open the page from the site's page list.
2. Edit its title and SEO description.
3. Expand a content section to change its heading, body, image or link.
4. Add supported sections; reorder or remove them using the editor controls.
5. Choose **Save draft** and inspect the private preview.
6. Use **Publish page** only after review.

For H24YOU's home page, retain the sequence: hero, products, research counters, research introduction, clearly labelled review area and latest Learn articles. Page revisions allow restoration; a draft save alone does not replace published content.

The screenshot shows the FastShop page editor interface. At the top, there's a header with the FastShop logo and navigation links for 'Dashboard' and 'Sites & content'. The main editing area is titled 'A little wonder. In every glass.' and includes a sub-header 'All pages and settings'. Below this, there are input fields for 'Page title' (containing 'A little wonder. In every glass.') and 'SEO description' (containing 'Explore a little wonder. in every glass. with H2 4 You. A fresh perspective on hydrogen water.'). To the right of the page title field is a link 'Open draft preview'. Below the SEO description field is a list of content sections, each with a right-pointing arrow and a title: 'Hero image or video · A little wonder. In every glass.', 'Products · Two ways to make it yours.', 'Image and text · Small molecule. Big curiosity.', 'Research figures · A growing conversation in science.', 'Reviews · Your everyday stories belong here.', and 'Latest articles · A little reading. A fresh perspective.'. At the bottom, there's an 'Add a section' input field and three buttons: 'Save draft' (green), 'Publish page' (green), and 'Unpublish' (white).

Product records versus product pages

Use **Products** for names, variants, product images and prices. Use the page editor for the gallery, introduction, accordions and supporting content.

- Tablets: Unflavoured, Raspberry and Pineapple.
- The brief's **\$29.95** price is **2995 USD cents** and remains provisional.
- The bottle's final USD price must be supplied; do not invent a conversion.
- Leave ingredients and Supplement Facts visibly pending until supplied.

Catalog changes can affect operational prices immediately; they are not page-draft edits. Configure monthly tablet eligibility separately in **Commerce**. The bottle should not inherit tablet subscription eligibility.

Save catalog details

Replace media and preview mobile layouts

Upload approved images through **Media library**, with meaningful alt text. Copy the resulting URL into the page's image field. Keep placeholder labels until the asset is genuinely replaced.

H24YOU's supplied SVG logos are brand assets; generated product/lifestyle images and motion studies are concepts, not actual product or customer photography.

Inspect phone, tablet and desktop layouts. Check the mobile menu, product gallery, readable text, focus states and video pause control. The brief requests a compressed hero with a mobile fallback; the final media still needs merchant approval.

Science and Learn: edit, source, review

The brief supplies counters **2,000+**, **120+** and **68**. These are supplied draft figures, not figures verified by this guide. Keep the source and confirmation date visible, and recheck them before publishing.

Use neutral research descriptions and original-source links. Do not place product buy buttons inside study lists. Keep unapproved benefit statements disabled in shared settings; an AI edit is not regulatory approval.

Learn has three draft launch articles. Review the full text, author label, source links and study-reference boxes before publication. The prompt library later in this guide identifies each article and its brief-supplied references.

Contact, cookies and analytics

Set **info@h24you.com** as the brief's contact destination, then verify delivery in the deployed environment. Contact entries are retained in **Inbox**; a stored entry is not proof that an email was delivered.

Review cookie **Accept**, **Decline** and **Preferences** behavior. Optional GA4 is configured in shared settings and should load only after analytics consent on public pages. Private previews are not an analytics acceptance test.

The brief says **no Meta pixel yet**. Marketing opt-in is separate from contact messages and account/order email. Replace privacy and other legal placeholders with reviewed text before public launch.

SECTION 03

Build with chat

Ask for one focused change, inspect the actual draft and keep editorial control. The following prompt library turns the H24YOU brief into repeatable tasks.

The chat workspace and its limits

Choose **Build with AI**. Select a page, then use **Select section** or **Target section** to focus the request. The preview refreshes after a validated draft save. On phones, switch between **Editor** and **Preview**.

With a configured model, use the natural-language prompts on the following pages. The server accepts only supported structured edits—not arbitrary code, payments or autonomous publication.

Without a key, the label says **Guided presets · AI provider not configured**. The screenshot contains a prepared natural-language request, not evidence that an LLM executed it. Do not paste the entire brief: messages are limited to 4,000 characters.

Start with the brief's original phase instruction

Original wording — brief §0. Use this to establish the review boundary; it is an instruction to the assistant, not a substitute for the publication controls.

Build in two phases and show me the result of Phase 1 before starting Phase 2.

Phase 1 – Design and content: home page, Shop, product pages, Science, Learn (3 articles), About us, Contact, header, footer, banner, cookie banner.

Phase 2 – Commerce: subscriptions, tax and shipping settings, checkout, discount codes, My account, order tracking, email capture.

If any instruction here is unclear or two instructions conflict, ask me before guessing.

For this FastShop implementation, add: **“Use FastShop’s existing components. Keep all edits as drafts. Do not enable commerce or publish without my approval.”**

Save your H24YOU brief one answer at a time

Copy-ready guided commands — adapted from brief §§1, 3 and 5. These work in the labelled preset fallback as well as providing a useful outline for AI chat.

Business: H2 4 You sells hydrogen tablets and a branded Hydroxy Go bottle.

Audience: US customers; English-language site; prices in USD.

Pages: Home, Shop, tablet and bottle collections and products, Science, Learn with three articles, About us, Contact, Terms, Privacy, FAQ and Returns.

Tone: Warm, energetic, curious and confident. Short, lively sentences. Enthusiasm about the experience and research, not health promises.

Expected result: the answers appear in the saved brief and the next question advances. Guided mode records the page plan; it does not generate all those pages.

Prompt: H24YOU's design language

AI prompt — adapted from brief §3. Select the home page. Split further if the assistant asks which section to change.

Keep H24YOU clean, modern, fresh and premium but approachable. Use warm off-white #FAF7F7, white and near-black #0E1116. Use logo blue sparingly, with pale aqua #E8F4FB and sand #EFE8DE accents. Keep the site light and airy. Prefer editorial typography, generous whitespace and asymmetric composition. Avoid purple/rainbow gradients, glowing orbs, endless identical rounded cards and filler slogans. Update supported design settings only. Preserve the logos and FastShop administration branding. Keep the changes in draft.

Review: inspect desktop and mobile. Bounded theme controls cannot express every design detail. Lovera requires the supplied licensed font; the H24YOU fixture uses a heading fallback and local Quicksand. Chat does not install arbitrary fonts.

Prompt: home hero and content rhythm

AI prompt — adapted from brief §§3 and 5.1. Target the home hero first.

Rewrite this H24YOU hero with a short, original headline and a Shop call to action. Make it warm, energetic and curious, focused on the first glass and everyday ritual. Do not promise health outcomes or reuse another brand's slogan. Keep the water imagery visibly identified as placeholder content. Change only this section's copy; do not publish.

Then select the next section and ask for its specific edit. Keep research figures in their shared settings rather than inventing new counters in body text.

No-key exercise: Headline: A little wonder. In every glass. updates the selected heading. It does not create a video or rebuild the entire home page.

Prompt: tablets and bottle storytelling

AI prompt — adapted from brief §§5.3–5.4. Select the tablets product page and the relevant text section; use catalog forms for variants and prices.

Draft inviting H24YOU tablet copy around convenience, flavour and the daily water ritual. Flavours are Unflavoured, Raspberry and Pineapple. Keep \$29.95 per box and pack size marked for confirmation. For ingredients and product details use: “Supplement Facts and ingredients to be added”. Do not invent doses, ingredients, specifications, testimonials or health claims. Save a draft.

Bottle follow-up: “Adapt only the approved Hydroxy Go text I provide. If specifications or the USD price are missing, leave visible placeholders.”

The builder does not fetch or verify the Hydroxy website for you. Supply reviewed source text; do not treat an assistant’s recollection as a product specification.

Prompt: Science, counters and claims

AI prompt — adapted from brief §§5.5, 7 and 8. Select a Science introduction section. Use classical settings for the counters and claim-approval switches.

Write a short, factual Science introduction that invites readers to explore original research. Use “Researchers have studied...” and “More research is needed.” Do not imply that our products diagnose, treat, cure or prevent a disease. Do not invent studies, endorsements or benefit statements. Keep product purchase buttons out of research lists. Save only a draft.

Counter review task: confirm the brief’s 2,000+ / 120+ / 68 figures with their source and a merchant-confirmed date. Do not add disease-model or benefit counters.

The brief’s benefit statements are drafts pending adviser review. Keep them disabled until approved; the footer disclaimer alone does not approve a claim.

Prompt: Learn article 1

AI prompt — adapted from brief §5.6. Open `/blogs/learn/what-is-molecular-hydrogen` and target its main text section.

Draft “What is molecular hydrogen? A plain-language introduction” for H2 4 You. Aim for 600–900 words, calm and educational. Author: H2 4 You team. End with a “Studies referenced” box using only the two references supplied below. Do not invent citations or make product health promises. If source text is unavailable, ask me for it rather than inventing findings. Save for review.

Brief-supplied references: Ichihara et al. 2015 and Dixon et al. 2013.

Provide the source excerpts and links in a follow-up message. The builder is not a research browser. Review word count, references and rendered structure manually; split the work into sections if a request exceeds supported output size.

Prompt: Learn article 2

AI prompt — adapted from brief §5.6. Open </blogs/learn/timing-and-consistency> and target its main text section.

Draft “Timing and consistency: how hydrogen water is used in studies” for H2 4 You. Aim for 600–900 words, calm and educational. Describe differences in study methods without converting study protocols into a product dose or medical recommendation. Author: H2 4 You team. End with a “Studies referenced” box using the supplied references. Ask for source text if needed. Save a draft.

Brief-supplied references: LeBaron et al. 2019 and Mikami et al. 2019.

Review: check every factual sentence against supplied source material. This guide reproduces the brief’s reference list; it does not independently verify the studies or endorse any health conclusion.

Prompt: Learn article 3

AI prompt — adapted from brief §5.6. Open </blogs/learn/how-to-read-hydrogen-research> and select its text section.

Draft “How to read hydrogen research: what is studied and what is still unknown” for H2 4 You. Aim for 600–900 words. Explain study limitations and why a research result is not a promise about our products. Author: H2 4 You team. End with a “Studies referenced” box using only supplied sources. Ask for source text rather than inventing findings. Save for human review.

Brief-supplied references: Li et al. 2024, Zhou et al. 2023 and Todorovic et al. 2023.

Keep the article educational. Check source metadata, links, claims and final word count before publishing. The merchant must approve all three launch articles.

Prompt: About, Contact and policies

AI prompt — adapted from brief §§1 and 5.7–5.9. Select the appropriate page; send separate requests rather than rewriting all company pages at once.

Adapt the founder story I supply for H2 4 You in warm, natural English. Include Andres Randma as the creator of Lumiorav magnesium water, as stated in our brief, but do not invent a biography. Use photo placeholders. Express that we are health enthusiasts who care about supporting our own health and sharing it with others. Ask for missing founder details. Save a draft only.

Contact task: use H2 4 You Ltd and info@h24you.com. Keep the legal address centralized and clearly marked for confirmation; do not reuse it as the warehouse.

Policy task: organize merchant-supplied Terms, Privacy, FAQ and Returns text. Missing policy wording stays a placeholder; generated text is not legal approval.

Preview, switch modes and undo

Choose **Design controls** for exact supported colors, spacing and typography. Choose **Classical editor** for pages, navigation and publication. Return to chat without copying content: all three views use the same saved draft.

Expand **Draft revision history** to inspect the latest 50 changes. **Undo latest change** works only while that unchanged revision is current. It does not rewind payments, catalog operations or published pages.

For a slow request, use **Cancel pending edit**. After a timeout, reload and inspect the saved result before trying again. If another editor changed the draft, the stale request is rejected rather than overwriting their work.

SECTION 04

Prepare commerce

Only after Phase 1 review: confirm merchant details, try the isolated simulator and prepare Stripe sandbox acceptance. Simulation is not a live store.

Replace and review merchant sample data

Open **Merchant details & samples**. On a private draft with commerce disabled, **Fill missing fields with sample data** provides clearly labelled examples. Existing values and previously reviewed fields are not blindly overwritten.

Replace company identity, legal address, contact email and EU warehouse details. The shipping origin is distinct from the legal address. The final warehouse may be in Estonia or another supported EU country; confirm it with the merchant.

Amounts are USD cents: `1000` is \$10; `7500` is \$75. The former is a training example, not a confirmed H24YOU fee. Explicitly review each field. Saving does not publish, approve tax registrations or activate payments.

The screenshot shows the 'Merchant details' page in the FastShop interface. At the top, there's a navigation bar with 'FastShop' and links for 'Dashboard' and 'Sites & content'. Below the title, a note states: 'Synthetic values are examples, not approved merchant details or tax advice. Replace them manually and explicitly review each field. No credentials are generated.' A green button labeled 'Fill missing fields with sample data' is visible. The page is divided into sections for 'Company name', 'Legal company address', and 'Contact email'. Each section contains a text input field with sample data, a status indicator 'Merchant Entered · Awaiting review', and a checkbox 'I have reviewed this value'.

☐ I have reviewed this value

Contact email

Prompt: propose shipping, then approve it

AI prompt — adapted from brief §6 and subsequent EU-origin direction:

Propose US-only shipping from our confirmed EU warehouse. For this training example only, use a \$10 flat fee and a \$75 free-shipping threshold. Show the proposed values for merchant review. Do not enable payments or approve tax registrations. Do not change anything until I explicitly approve the proposal.

No-key exercise: Shipping: 1000 proposes the \$10 fee only.

Inspect **Review merchant changes**, tick **I reviewed every proposed change** and approve—or reject. Stale proposals need a fresh request. Approved prices and shipping are operational changes, not reversible page edits. Merchant-detail proposals currently require commerce disabled.

The screenshot displays the FastShop merchant interface, divided into two main panels. The left panel, titled 'Review merchant changes', shows a proposal for shipping a 'branded Hydroxy Go bottle to the US market'. It includes a 'Shipping below threshold (USD cents): \$10.00' and a 'Status: pending'. A green button 'Approve merchant changes' is visible, along with a 'Reject proposal' button. Below this, there's a 'Target section (optional)' dropdown set to 'Whole page / design' and a text area for 'Describe your site or a change' containing the text 'Warm cream and green, editorial headings, less whitespace...'. A green 'Update draft' button is at the bottom. The right panel shows a 'Preview page' for 'A little wonder. In every glass.' with a 'Play motion' button. The preview includes a navigation bar with links like 'Shop', 'Science', 'Learn', 'About us', 'Contact', 'Account', and 'Log in'. The main content area features a large image of water with the text 'A little wonder. In every glass.' and a 'Shop the collection' button.

Try checkout without credentials

Open **Try commerce demo** → **Start private demo**. Its catalog, stock, shopper and orders are separate from your real store. For this walkthrough, one sample item was manually renamed **H24YOU training tablets — PLACEHOLDER**; other simulator defaults are not H24YOU's approved catalog.

Set quantity and one-time/monthly purchase, then open **Checkout**. Enter a sample US destination, confirm recurring consent where applicable and calculate the total. Try both simulated approval and decline.

The displayed tax is an illustrative fixture, not a real state or ZIP rate. No card details, actual payment, real email or fulfillment request is used.

Configure US commerce through the explicit forms

In **Commerce**, confirm EU origin, US destinations, shipping fee and threshold. Review product tax classifications and registrations with the responsible merchant. Use Stripe test credentials only for sandbox acceptance; live mode is not offered.

Real sandbox tax is calculated through Stripe Tax using the full delivery address, not a hard-coded state percentage. A failed tax lookup must not become zero tax. The final total must be reviewed before payment.

The first-order 10% offer and subscription 10% saving stack sequentially: **19% combined before cent rounding**, not 20%. Verify supported payment methods; do not show PayPal or wallet icons as accepted merely because the original brief listed them.

FastShop Dashboard Sites & content

SECTION 05

Review and launch

Approve the design/content result separately from commerce. A complete-looking preview can still contain unconfirmed prices, imagery, source figures and policies.

Phase 1 review: show the site before commerce

Walk through home, Shop, both products, Science, all three Learn articles, About, Contact and legal pages with the merchant. Review header, footer, announcement, offer preview and cookie controls on phone, tablet and desktop.

Confirm tone, visual language, navigation, SEO descriptions, alt text and video fallbacks. Check research sources and remove invented or unapproved claims. Keep sample reviews visibly labelled—or omit them until genuine reviews exist.

Record merchant approval before moving to commerce acceptance. Publishing the first page can expose a public noindex preview: **noindex is not private access**. Use authenticated previews for unpublished work.

Phase 2 review: simulation, sandbox, launch

Gate	Evidence required
Private demo	Synthetic checkout, offers, account, subscriptions, tracking and local mail work
Merchant review	Confirmed legal details, EU origin, US rates, product prices and tax settings
Stripe sandbox	Real test-provider tax, payment success/failure, webhooks and idempotency checked
Recurring operations	Renewal scheduling, payment updates, failure/recovery and notices exercised
Customer communications	Real test delivery, sign-in, marketing opt-in and unsubscribe verified
Launch decision	Reviewed content/policies, payment-method acceptance and deployment checks complete

Never migrate simulated paid orders, fake cards or demo subscriptions into the real store. Live payments remain a separate release decision. See the repository's [Phase 2 acceptance register](#) for unresolved provider gates.

H24YOU placeholder replacement register

Item	Merchant action before launch
Company and warehouse	Confirm legal address separately from actual EU fulfillment origin
Prices and shipping	Confirm tablet pack size/price, bottle USD price, flat fee and \$75 threshold
Product facts	Supply ingredients, Supplement Facts, directions and approved bottle specifications
Photos and video	Replace generated hero/product/lifestyle concepts and motion studies
People and reviews	Supply founder details, approved portraits and genuine testimonials
